

2024 City of Livingston Annual Water Quality Report for the period of January - December 2023

2024 Annual Water Quality Report
(Testing Performed January - December 2023)

CITY OF LIVINGSTON UTILITIES BOARD

PWSID AL0001220
Post Office Box W
Livingston, AL 35470
Phone 205-652-2401 or 2505
Fax 205-652-9772

We are pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. We are committed to providing a quality drinking water that meets or exceeds all state and federal drinking water standards. The United States Environmental Protection Agency (EPA) prescribes regulations that limit the amount of certain contaminants in water provided by public water systems to ensure that tap water is safe to drink.

Water Source	Two (2) groundwater wells producing from the Coker aquifer
Additional Connections	Sell water to Sumter County Water Authority
Water Treatment	Chlorination and corrosion control
Storage Capacity	Five (5) tanks with a total capacity of 1,150,000 gallons
Number of Customers	Approximately 1500
Board Members	Clete Beard Hiram Patrenos Thomas M. Tartt, III Mack Rutherford Iola Williams

Source Water Assessment

In compliance with the Alabama Department of Environmental Management (ADEM), Livingston Utilities Board has developed a Source Water Assessment plan that will assist in protecting our water sources. This plan provides additional information such as potential sources of contamination. It includes a susceptibility analysis, which classifies potential contaminants as high, moderate, or non-susceptible to contaminating the water source. The report is available in our office for review during normal business hours.

Livingston Utilities Board routinely completes a water storage facility inspection plan and utilizes a Bacteriological Monitoring Plan. The chlorine residual is monitored closely within the distribution system. We have adopted a Cross-Connection Control Program for the purpose of detecting and preventing a danger to public health from cross-connection contamination.

Please help us make these efforts worthwhile by protecting our source water. Carefully follow instructions on pesticides and herbicides you use for your lawn and garden, and properly dispose of household chemicals, paints and waste oil.

Information about Lead

Elevated levels of lead can cause serious health problems, especially for pregnant women, infants, and young children. However, lead is rarely found in source water. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

Use only water from the cold-water tap for drinking, cooking, and especially for making baby formula. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply, and hot water is more likely to cause lead to leach from plumbing materials. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water hotline or at www.epa.gov/safewater.

General Information

All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. MCL's, defined in a List of Definitions in this report, are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water.

Some people may be more vulnerable to contaminants in drinking water than the general population. People who are immuno-compromised such as cancer patients undergoing chemotherapy, organ transplant recipients, HIV/AIDS positive or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus, monitoring for these contaminants was not required.

Questions?

If you have any questions about this report or concerning your water utility, please contact Walt Ezell. We regularly value customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the fourth Monday of each month at City Hall at 11:00 a.m.

More information about contaminants to drinking water and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (1-800-426-4791).

Monitoring Schedule and Results

Livingston Utilities Board routinely monitors for constituents in your drinking water according to Federal and State laws. This report contains results from the most recent monitoring which was performed in accordance with the regulatory schedule

Constituent Monitored	Date Monitored
Inorganic Contaminants	2022
Lead/Copper	2023
Microbiological Contaminants	current
Nitrates	2023
Radioactive Contaminants	2019
Synthetic Organic Contaminants (including pesticides and herbicides)	2023
Volatile Organic Contaminants	2023
Disinfection By-products	2023
PFAS	2020

As you can see by the table below, our system had no MCL violations. We have learned through our monitoring and testing that some constituents have been detected. We are pleased to report that our drinking water meets federal and state requirements. This report shows our water quality and what it means.

TABLE OF DETECTED DRINKING WATER CONTAMINANTS						
Contaminants	Violation Y/N	Level Detected	Unit Msmt	MCLG	MCL	Likely Source of Contamination
Alpha emitters	NO	5.4	PCI/l	0	15	Erosion of natural deposits
Combined radium	NO	3.2	PCI/l	0	5	Erosion of natural deposits
Barium	NO	0.07-0.12	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Copper (distribution samples)	NO	0.310 * 0 > AL	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Fluoride	NO	0.45-0.58	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from factories
Lead (distribution samples)	NO	0.0017 * 0 > AL	ppm	0.015	AL=0.015	Corrosion of household plumbing systems, erosion of natural deposits
Secondary Contaminants						
Chloride	NO	ND-214	ppm	n/a	250	Naturally industrial; factory discharge; agricultural runoff
Hardness	NO	29.5-40.6	ppm	n/a	n/a	Naturally occurring; treatment with water additives
Iron	NO	0.10-0.19	ppm	n/a	0.3	Naturally industrial; factory discharge; agricultural runoff
Manganese	NO	0.01-0.02	ppm	n/a	0.05	Erosion of natural deposits; leaching from pipes
pH	NO	7.1-7.7	S.U.	n/a	n/a	Naturally occurring; treatment with water additives
Sodium	NO	133-166	ppm	n/a	n/a	Naturally occurring in the environment
Total Dissolved Solids	NO	405-493	ppm	n/a	500	Naturally industrial; factory discharge; agricultural runoff

* Figure shown is 90th percentile and # of sites above the Action Level = 0

PFAS Contaminants

The U.S. Environmental Protection Agency (EPA) has not established national primary drinking water regulations for PFAS substances. Below is a list of PFAS contaminants for which our system monitored in 2020 and the results of that monitoring. PFAS was not detected in our drinking water. For more information on PFAS contaminants, please consult www.epa.gov/pfas

Contaminant	Unit Msmt	Level Detected	Contaminant	Unit Msmt	Level Detected
11CI-PF3OUdS (11-chloroicososulfuro-3-oxaundecane-1-sulfonic acid)	ppb	ND	Perfluorheptanoic acid	ppb	ND
9CI-PF3ONS (9-chlorohexadecadecafuro-3-oxanone-1-sulfonic acid)	ppb	ND	Perfluorhexanesulfonic acid	ppb	ND
ADONA (4,8-dioxa-3H-perfluorononanoic acid)	ppb	ND	Perfluorononanoic acid	ppb	ND
HFPO-DA (Hexafluoropropylene oxide dimer acid)	ppb	ND	Perfluorooctanesulfonic acid	ppb	ND
NEFOSAA (N-ethylperfluorooctanesulfonamidoacetic acid)	ppb	ND	Perfluordecanoic acid	ppb	ND
NMefOSAA (N-methylperfluorooctanesulfonamidoacetic acid)	ppb	ND	Perfluortridecanoic acid	ppb	ND
Perfluorobutanesulfonic acid	ppb	ND	Perfluorundecanoic acid	ppb	ND
Perfluorodecanoic acid	ppb	ND	Total PFAS	ppb	ND
Perfluorhexanoic acid	ppb	ND			
Perfluorododecanoic acid	ppb	ND			

DEFINITIONS

Action Level- the concentration of a contaminant that, if exceeded, triggers treatment or other requirements which a water system must follow.

Coliform Absent (ca)- Laboratory analysis indicates that the contaminant is not present.

Cryptosporidium - a microscopic parasite that can cause disease, mainly diarrhea, if swallowed.

Disinfection byproducts (DBPs)- are formed when disinfectants used in water treatment plants react with bromide and/or natural organic matter (i.e., decaying vegetation) present in the source water. Different disinfectants produce different types or amounts of disinfection byproducts. Disinfection byproducts for which regulations have been established include trihalomethanes (THM), haloacetic acids (HAA5), bromate, and chlorite.

Initial Distribution System Evaluation (IDSE)- a one-time study conducted by water systems to identify distribution system locations with high concentrations of trihalomethanes (THMs) and haloacetic acids (HAA5).

Local Annual Running Annual Average (LRAA)-yearly average of all the DPB results at each specific sampling site in the distribution system. The highest distribution site LRAA is reported in the Table of Detected Contaminants.

Maximum Contaminant Level (mandatory language) The Maximum Allowed (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (mandatory language) The Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL)-the highest level of a disinfectant allowed in drinking water. Millirems per year (mrem/yr)-measure of radiation absorbed by the body.

Nephelometric Turbidity Unit (NTU)-a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Non-Detects (ND)- laboratory analysis indicates that the constituent is not present above detection limits of lab equipment.

Not Reported (NR)-laboratory analysis, usually Secondary Contaminants, not reported by water system. EPA recommends secondary standards to water systems but does not require systems to comply.

Parts per billion (ppb) or Micrograms per liter (µg/l)-one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per million (ppm) or Milligrams per liter (mg/l)-one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l)-one part per quadrillion corresponds to one minute in 2,000,000,000 years, or a single penny in \$10,000,000,000.

Picocuries per liter (pCi/L)-picocuries per liter is a measure of the radioactivity in water.

RAA-Running annual average

Standard Units (S.U.)-pH of water measures the water's balances of acids and bases and is affected by temperature and carbon dioxide gas. Water with less than 8.5 could be acidic, soft, and corrosive. A pH greater than 8.5 could indicate that the water is hard.

Treatment Technique (TT)- a required process intended to reduce the level of a contaminant in drinking water.

Variances & Exemptions (V&E)-State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

The following table is a list of Primary Drinking Water Contaminants and a list of Unregulated Contaminants for which our water system routinely monitors. These contaminants were not detected in your drinking water unless they are listed in the Table of Detected Drinking Water Contaminants.

STANDARD LIST OF PRIMARY DRINKING WATER CONTAMINANTS						
Contaminant	MCL	Unit of Msmt	Contaminant	MCL	Unit of Msmt	
Bacteriological Contaminants			trans-1,2-Dichloroethylene	100	ppb	
Total Coliform Bacteria	<5%	present or absent	Dichloromethane	5	ppb	
Fecal Coliform and E. coli	0	present or absent	1,2-Dichloropropane	5	ppb	
Fecal Indicators	0	present or absent	Di (2-ethylhexyl)sebacate	400	ppb	
Turbidity	TT	NTU	Di (2-ethylhexyl)phthalate	6	ppb	
Cryptosporidium	TT	calc. organisms/liter	Ethylbenzene	7	ppb	
Radiochemical Contaminants			Dioxin (2,3,7,8-TCDD)	30	ppt	
Radon	4	mrem/yr	Diquat	20	ppb	
Alpha emitters	15	pCi/l	Endosulf	100	ppb	
Combined radium	5	pCi/l	Ethinol	2	ppb	
Uranium	30	pCi/l	Epichlorohydrin	TT	TT	
Inorganic Chemicals			Ethylbenzene	700	ppb	
Antimony	6	ppb	Ethylene dibromide	50	ppb	
Arsenic	10	ppb	Glyphosate	700	ppb	
Asbestos	7	MFL	Heptachlor	400	ppt	
Barium	2	ppm	Heptachlor epoxide	200	ppt	
Beryllium	4	ppb	Hexachlorobenzene	1	ppb	
Cadmium	5	ppb	Hexachlorocyclopentadiene	50	ppb	
Chromium	100	ppb	Lindane	200	ppt	
Copper	AL=13	ppm	Methoxychlor	40	ppb	
Cyanide	200	ppb	Oxamyl (Hydaly)	200	ppb	
Fluoride	4	ppm	Polychlorinated biphenyls	0.5	ppb	
Lead	AL=15	ppb	Pentachlorophenol	1	ppb	
Mercury	2	ppb	Picloram	500	ppb	
Nitrate	10	ppm	Simezone	4	ppb	
Nitrite	1	ppm	Styrene	100	ppb	
Selenium	05	ppm	Tetrahydroethylene	5	ppb	
Thallium	002	ppm	Toluene	1	ppm	
Organic Contaminants			Toxaphene	3	ppb	
2,4-D	70	ppb	2,4,5-TP(Silvex)	50	ppb	
Acrylamide	TT	TT	1,2,4-Trichlorobenzene	07	ppm	
Alachlor	2	ppb	1,1,1-Trichloroethane	200	ppb	
Benzene	5	ppb	1,1,2-Trichloroethane	5	ppb	
Benz(a)pyrene (PAHs)	200	ppt	Trichloroethylene	5	ppb	
Carbofuran	40	ppb	Vinyl Chloride	2	ppb	
Carbon tetrachloride	5	ppb	Xylenes	10	ppm	
Chlordane	2	ppb	UNREGULATED CONTAMINANTS			
Chlorobenzene	100	ppb	1,1-Dichloropropane	Alicarb	Chloroform	Methachlor
Dieldrin	200	ppb	1,1,1,2-Tetrachloroethane	Alicarb Sulfone	Chloromethane	Metribuzin
Dibromochloropropane	200	ppb	1,1,2,2-Tetrachloroethane	Alicarb Sulfoxide	Dibromochloromethane	N-Butylbenzene
p-Dichlorobenzene	800	ppb	1,1-Dichloroethane	Aldrin	Dibromomethane	Naphthalene
m-Dichlorobenzene	75	ppb	1,2,3-Trichlorobenzene	Bromobenzene	Dicamba	N-Propylbenzene
1,2-Dichloroethane	5	ppb	1,2,3-Trichloropropane	Bromochloromethane	Dichlorodifluoromethane	O-Chlorotoluene
1,1-Dichloroethylene	7	ppb	1,2,4-Trimethylbenzene	Bromodichloromethane	Dieldrin	P-Chlorotoluene
cis-1,2-Dichloroethylene	70	ppb	1,3-Dichloropropane	Bromofom	Hexachlorobutadiene	P-Isopropylbenzene
			1,3-Dichloropropane	Bromomethane	Isopropylbenzene	Propachlor
			1,3,5-Trimethylbenzene	Butachlor	M-Dichlorobenzene	Sec-Butylbenzene
			2,2-Dichloropropane	Carbaryl	Methomyl	Tert-Butylbenzene
			6-Hydroxycarboluran	Chloroethane	MTBE	Trichlorofluoromethane
